

Marine Monitoring Handbook

March 2001

Edited by Jon Davies (senior editor), John Baxter, Martin Bradley,
David Connor, Janet Khan, Eleanor Murray, William Sanderson,
Caroline Turnbull and Malcolm Vincent

Contents

Preface	7
Acknowledgements	9
Contact points for further advice	9
Preamble	11
Development of the Marine Monitoring Handbook	11
Future progress of the Marine Monitoring Handbook	11
Section 1	
Background	
Malcolm Vincent and Jon Davies	13
Introduction	14
Legislative background for monitoring on SACs	15
The UK approach to SAC monitoring	16
The role of monitoring in judging favourable condition	17
Context of SAC monitoring within the Scheme of Management	22
Using data from existing monitoring programmes	23
Bibliography	25
Section 2	
Establishing monitoring programmes for marine features	
Jon Davies	27
Introduction	28
What do I need to measure?	28
What is the most appropriate method?	37
How do I ensure my monitoring programme will measure any change accurately?	40
Assessing the condition of a feature	51
A checklist of basic errors	53
Bibliography	54
Section 3	
Advice on establishing monitoring programmes for Annex I habitats	
Jon Davies	57
Introduction	60
Reefs	61
Estuaries	70
Sandbanks which are slightly covered by seawater all the time	79
Mudflats and sandflats not covered by seawater at low tide	87

Large shallow inlets and bays	94
Submerged or partly submerged sea caves	101
Lagoons	110

Section 4

Guidance for establishing monitoring programmes for some Annex II species

Jon Davies	119
Introduction	121
Grey seal <i>Halichoerus grypus</i>	122
Common seal <i>Phoca vitulina</i>	125
Bottlenose dolphin <i>Tursiops truncatus</i>	129

Section 5

Advice on selecting appropriate monitoring techniques

Jon Davies	133
Introduction	135
Monitoring spatial patterns	136
Monitoring biological composition	148
Future developments	161
Bibliography	161

Section 6

Procedural guidelines

Caroline Turnbull and Jon Davies	163
---	-----

6 Procedural guidelines

Caroline Turnbull and Jon Davies

The following table lists the techniques for which guidance will be available. The status column indicates the current stage of development for each procedural guideline. Those guidelines whose status is listed as 'in prep.' or 'planned' are not included in the current version (March 01).

<i>Attribute</i>	<i>Number</i>	<i>Full title of guideline</i>	<i>Summary title</i>	<i>Status</i>
Extent				
	1-1	Intertidal resource mapping using aerial photographs	Intertidal resource mapping	finished
	1-2	Fixed viewpoint photography	Viewpoint photography	finished
	1-3	Seabed mapping using acoustic ground discrimination interpreted with ground truthing	AGDS	finished
	1-4	The application of side scan sonar for seabed mapping	Side scan sonar	finished
	1-5	Mosaicing side scan sonar images to map seabed features	Mosaicing sonar images	in prep.
	1-6	Mapping extent using point samples	Point sample mapping	in prep.
		Satellite and airborne multispectral remote sensing	Remote imaging	planned
		Aerial photography and photogrammetry	Air photo interpretation	planned
		LIDAR	LIDAR	planned
Physical properties				
	2-1	Measuring water quality parameters: clarity, chemistry, density, salinity and temperature	Measuring water quality	in prep.
	2-2	Sediment profile imagery	Sediment profile imagery	finished
	2-3	Undertaking a physical survey of littoral and sublittoral sea caves	Surveying sea caves	finished
	2-4	Determining the structure and particle size composition of sediment	Particle size analysis	in prep.
		Routine monitoring of water chemistry parameters using in situ data loggers	Water chemistry data loggers	planned
		Analysing the chemical structure of marine sediments	Sediment chemical analyses	planned
		Measuring bathymetry using standard hydrographic techniques	Bathymetric mapping	planned

<i>Attribute</i>	<i>Number</i>	<i>Full title of guideline</i>	<i>Summary title</i>	<i>Status</i>
Biotic composition				
Biotopes				
	3-1	<i>In situ</i> intertidal biotope recording	Intertidal biotope ID	finished
	3-2	<i>In situ</i> survey of intertidal biotopes using abundance scales and checklists at exact locations (ACE surveys)	Intertidal ACE	finished
	3-3	<i>In situ</i> survey of subtidal (epibiota) biotopes and species using diving techniques	Subtidal biotope ID	finished
	3-4	Descriptive and quantitative surveys using remote operated vehicles	ROV	in prep.
	3-5	Identifying biotopes using video recordings	Drop-down video	finished
	3-6	Quantitative sampling of intertidal sediment species using cores	Intertidal core sampling	finished
	3-7	<i>In situ</i> quantitative survey of subtidal epibiota using quadrat sampling techniques	Subtidal quadrat sampling	finished
	3-8	Quantitative sampling of sublittoral sediment biotopes and species using diver-operated cores	Sublittoral coring by diver	finished
	3-9	Quantitative sampling of sublittoral sediment biotopes and species using remote-operated grabs	Grab sampling	finished
	3-10	Sampling marine benthos using suction samplers	Suction sampling	finished
	3-11	Littoral monitoring using fixed quadrat photography	Intertidal quadrat photography	finished
	3-12	Quantitative surveillance of sublittoral rock biotopes and species using photographs	Sublittoral photography	finished
	3-13	<i>In situ</i> surveys of sublittoral epibiota using hand-held video	Subtidal hand-held video	finished
	3-14	<i>In situ</i> survey of sublittoral epibiota using towed sledge video and still photography	Towed sledge	finished
Species				
	4-1	Sampling fish and demersal fish populations in subtidal rock habitats	Fish in subtidal rock habitats	finished
	4-2	Recording benthic and demersal fish in dense vegetative cover	Fish in vegetative cover	finished
	4-3	Sampling benthic and demersal fish populations on sediments	Fish on sediments	finished
	4-4	Sampling fish in rockpools	Fish in rockpools	finished
	4-5	Techniques for monitoring the abundance and behaviour of bottlenose dolphins	Bottlenose dolphins	draft
		Using the National biotope classification for monitoring		planned
Biological structure				
	5-1	Assessing the population structure of <i>Modiolus modiolus</i> reefs by shell ageing techniques	Mollusc shell ageing	in prep.
		Measuring the vertical distribution of species or biotopes using levelling	<i>Shore profiling</i>	planned
		Measuring spatial patterns using transect survey techniques	<i>Transect survey</i>	planned
General				
	6-1	Positioning by differential GPS in near-shore tidal waters	dGPS	finished
	6-2	Relocation of intertidal and subtidal sites	Site relocation	finished
	6-3	Specimen collection, preservation and storage	Specimen collection	finished
